High concentrations of E.coli detected in Tioweró:ton

For immediate release

(Kahnawake – 19, Ohiarí:ha/June 2024)

The Public Safety Division, in conjunction with the Lands Unit of the Mohawk Council of Kahnawà:ke, wishes to inform the community of recent water sampling results in Tioweró:ton.

Water testing by Environmental Health Services of Kahnawake Shakotíia'takehnhas Community Services detected a high level of E.coli at the first Bridge and the Falls. As a precaution, Kahnawa'kehró:non are advised not to swim in that area until further notice.

The weather forecast projects rain this coming Saturday, Sunday, and Monday, which should reduce E.coli values when the next sampling is done. Water testing will continue, and updates will be provided to the community as they become available. The next test will be on Monday, July 1, weather permitting.

For any questions or concerns, please call the Public Safety Division at 450-632-0635 or Environmental Health Services at 450-635-9945. For more information on the recreational guidelines, [please click here](#).
